

WORK NOTICE DWA Plume San Leandro, California

July 2006

Field Work Being Conducted on July 17 to 19, 2006

The Department of Toxic Substances Control (DTSC) is circulating this work notice to inform the community about upcoming work at Monterey Boulevard and at the intersection of Alvarado Street and Fremont Street in San Leandro. This work will happen within the DWA Plume (formerly known as the San Leandro Plume). Previous sampling work has found volatile organic compounds (VOCs) in the groundwater within the DWA Plume. An organic food-grade substance will be injected into the groundwater contaminated with VOCs. This substance encourages the natural breakdown of VOCs. The work will be conducted according to the June 2006, Hydrogen Release Compound Injection Work Plan, San Leandro Residential Area Site which has been prepared by DTSC.

Workers will be at Monterey Boulevard near Portola Drive and at the intersection of Alvarado Street and Fremont Street, on July 17 to 19, 2006, between 7:30 A.M. and 5:30 P.M. This work will take approximately 3 days to complete. The following work activities will happen:

- **At Monterey Boulevard location, approximately 10 gallons of the food grade substance per location will be pumped into groundwater via 2 inch holes at 12 locations to a depth of 25 feet below ground surface.**
- **At the intersection of Alvarado Street and Fremont Street, approximately 15 gallons of the food grade substance per location will be pumped into groundwater via 2 inch holes at 20 locations to a depth of 25 feet below ground surface.**
- **Workers wearing safety gear will operate the equipment.**
- **Some parking on Monterey Boulevard may be restricted. Traffic will be directed around these locations.**
- **Holes will be filled with a concrete mixture and patched with asphalt after the work is completed at each location.**
- **DTSC reminds residents not to use well water from private wells within the DWA Plume area for drinking.**
